

AnnRE

Annotation Refinement with Evidence

Long-read RNA evidence → gene-model review

RESEARCH ALPHA · EVIDENCE FIRST

Audit reference structures

Exact joins, alternative connections and exon contexts

Make candidates inspectable

Read-level evidence, alternate models and offline reports

Track decisions later

Visual curation and reversible edits remain planned

BSF census: 105 genes / 116 joins prioritised for review

Candidates, not confirmed errors. Separate genome-wide census; portable alpha demonstrated on ten genes.

Generated with OpenAI Codex and OpenAI models; reviewed and guided by Andreas Bachler.
